npm install -g strong-cli: Announcing a New Distribution Model

Until now, we've been providing an integrated installer for StrongLoop that included a package of Node.js, plus the StrongLoop command-line tool (slc), example apps, and so on, in a versioned distribution. We did this because we believed developers wanted an easy, one-shot way to get our software. However, as StrongLoop has gathered interest, we've come to understand that most people would prefer it to be available from the Node Package Manager (npm) instead.

StrongOps 2.0 Preview
The StrongLoop team is excited to preview StrongOps 2.0, industry's leading performance monitoring and management solution for Node.js. Check out the video below or watch the StrongOps 2.0 preview on our Vimeo page.

Announcing Node Fundamentals Training from StrongLoop and OlinData

It's not too early to bang out a few New Year's resolutions, especially if getting some structured training around Node.js is on your to-do list for 2014! StrongLoop is excited to have partnered with OlinData to put together a 3-day training course on "Node.js Fundamentals for Developers."

What's Next?

It's easier than ever to start with StrongLoop. All it takes is an npm install.

- **LoopBack**: An open source, mobile backend based on Node.js.
- **StrongOps**: Debugging, profiling, performance monitoring and scaling with clusters.
- **StrongNode**: Technical support and bug fixes for Node.js core, popular userland modules and those developed by StrongLoop.

You can get great news, tutorials, and important technical articles from our StrongBlog.
