

## Announcing Complete Process Management for Node Clusters

StrongLoop is excited to **announce** the immediate availability of **StrongLoop Process Manager**, the industry's best deployment and runtime management solution for Node clustering.

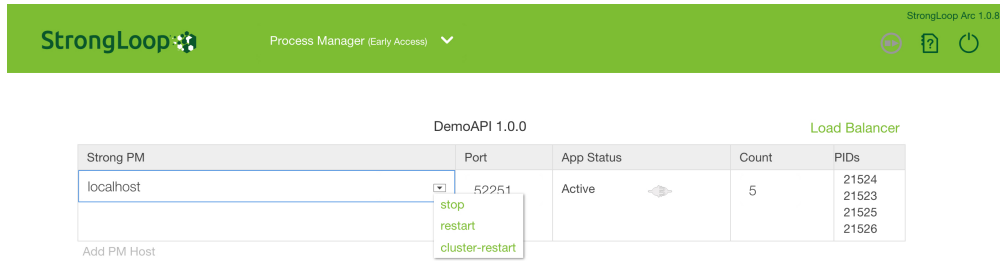

The screenshot shows the StrongLoop Process Manager interface. At the top, there is a green header bar with the StrongLoop logo on the left, "Process Manager (Early Access)" in the center, and navigation icons on the right. Below the header, the main content area is titled "DemoAPI 1.0.0" and "Load Balancer". It features a table with columns for "Strong PM", "Port", "App Status", "Count", and "PIDs".

Strong PM	Port	App Status	Count	PIDs
localhost	62506	Active	6	22253 22252 22254 22255
apiserver.aws.com	62567	Active	2	22572 22571

Below the table, there is a link labeled "Add PM Host".

StrongLoop's Process Manager improves upon existing community cluster management efforts such as forever and pm2 by adding:

- A graphical interface via **StrongLoop Arc**
- nginx load balancing integration
- Remote management
- Automated build and multi-host deploy
- Integrated monitoring and profiling

**StrongLoop Arc** is a graphical UI for the **StrongLoop API Platform** that complements the **slc command line** tools for developing APIs quickly and getting them connected to data. Arc also includes tools for profiling and monitoring Node apps.

## GoDaddy Selects StrongLoop to Power Their APIs

StrongLoop is excited to announce that GoDaddy **has selected** its solutions to assist in developing both public and private APIs using

Node.js. The new GoDaddy API's make it easier for its business partners to buy and sell domains and associated GoDaddy products. This **popular program** represents a growing revenue stream for GoDaddy, and is critically important to GoDaddy's Internet of Things enablement strategy. Read **the complete announcement** or check out our **testimonials page** to learn how StrongLoop is helping companies succeed with Node.

## **Node is Enterprise Ready: A Foundation, v0.12 and Big Growth Numbers!!**

It has been an exciting year so far for Node! Not only has there been tremendous adoption by Node in the enterprise, but in the last week we've also seen **Node v0.12 finally get released**, plus the Node project officially move into **a foundation** with an open governance model. Check out this infographic that captures some of the data around the enterprise adoption of Node.

# Node.js Goes Mainstream in the Enterprise

## THE NUMBER OF NODE PROFESSIONALS IS GROWING FAST!

There are...  
**470**  
GROUPS

and over

**123,000**  
MEMBERS

who participate in Node Meetups worldwide.

There are over  
**100,000**

LinkedIn members who have listed Node as a skill.

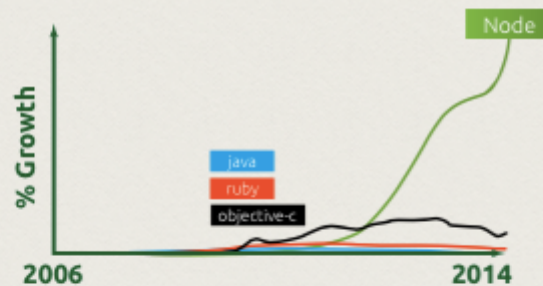

npm download volume is greater during the workweek

More Node development is happening on company time vs personal time.

According to indeed.com Node jobs are growing faster than other languages.

## NODE IS ENTERPRISE OPEN SOURCE

Big companies that rely on open source projects to run business critical systems have historically pushed for open governance and transparency. In 2015, the Node project was moved to a foundation supported by the Linux Foundation.

*See the rest of the infographic...*

Here's a preview of some of the interesting datapoints we uncovered...

- The number of Node professionals is growing fast! Faster than other languages

- Node projects are in development or in production at companies that might surprise you
- Big users and big software companies are members of a Node foundation
- Big enterprise software vendors are beginning to support the Node usage of their customers
