

An IBM Company

API CONNECT IS HERE!

Last month, we proudly announced IBM API Connect, an API management solution with a built-in gateway, allowing you to create, run, manage, and secure APIs and Microservices.

On April 22, we proudly announced that API Connect has arrived!

IBM **API** Connect

We described API Connect in our original announcement, saying:

API Connect is the first of its kind: a unified end-to-end API management solution that enables the automated creation of APIs, simplified discovery of systems of records, self-service access for internal and third party developers and built-in security and governance. It's built for hybrid cloud environments, so you can place it wherever your API runs best!

If you've used StrongLoop tools in the past, we expect you to be able to comfortably get on board with API Connect. And if you are new to API tools, we

think the unified management console will help make your job much easier in managing four key areas of the API lifecycle:
