

An IBM Company

Coding Guidelines for LoopBack Are Here!

To make it easier to contribute to the LoopBack project, we've centralized and opened up the general coding guidelines we've been using internally at [loopback-contributor-docs](#). We hope this will help clear up any ambiguity about what we expect and improve turnaround times for landing pull requests from community members.

These guidelines include:

- New repository [loopback-contributor-docs](#) for open-source contributor information
- ESLint integration
- Functional area owners
- Style guide
- Git commit message guidelines
- More public visibility into continuous integration (CI) results

- Upstream/downstream CI test results

IBM API Connect

API Connect vs API Management

Unlike other API Management offerings in the market today, IBM API Connect expands beyond basic management and offers an integrated environment to create, run, manage, and secure enterprise grade APIs and microservices to power modern digital applications.

Cloud Integration Tools Can Be Universal Solution to Old IT Problem

Experts and vendors say iPaaS is emerging as a preferred means in cloud integration strategies that also have to get on-premises apps to talk among themselves. This article includes commentary from Juan Carlos Soto, IBM's Vice President of Cloud Integration and API Economy.
